

Relatório de Cobertura de Testes (Web)

O presente relatório apresenta os resultados da análise de cobertura de testes do sistema **Bid-Go** (Web), com o objetivo de avaliar a extensão e eficácia dos testes automatizados implementados. A cobertura de testes é um indicador essencial da qualidade do software, permitindo identificar áreas do código que foram ou não verificadas durante a execução dos testes.

Os resultados foram obtidos através da recolha de métricas durante a execução dos testes E2E, abrangendo componentes, páginas e lógica da interface da aplicação. Este relatório fornece uma visão detalhada sobre a percentagem de linhas e ramos de código testados, possibilitando uma avaliação objetiva da robustez e fiabilidade do sistema.
